EXPERIENCE

Microsoft

Current Role - Software Engineer July 2022 - Present

I worked on the Confidential Consortium Framework (CCF). Helped to add support for AMD SNP. Worked in Azure to create CI testing workflows in both Github and Azure DevOps. Moved into Azure Core to work on Confidential Azure Container Instances. Worked on adding Azure support to the Google's Privacy Sandbox.

Arm

Senior Software Engineer September 2017 - July 2022 Promoted in April 2018 and April 2020

I worked on instrumenting the Mali GPU Driver. I owned our visualisation tool, which is written with D3 and NodeJS, and drive requirements gathering and design work for that, including a major design overhaul. I helped to architect our Python data modelling library. I also acted as my teams Scrum Master, driving process improvements.

Intern - Vulkan Timeline Visualisation July - September 2016

Instrumented and visualised the Vulkan timeline. I gained a useful knowledge of the Vulkan API.

Intern - Precompiled OpenCL Headers July - September 2015

Added support for precompiling OpenCL headers with Clang to improve loading performance and maintainability.

Intern - Compute Shaders July - September 2014

Research into using compute shaders to render SVG paths.
